DETAILED ACTION

EXAMINER'S AMENDMENT

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

1. The abstract of the disclosure is objected to because there are the phrases of "disclosed" in the abstract. See MPEP § 608.01(b). A new abstract is provided in a separate sheet herewith.

2. The application has been amended as follows:

In claim 27,

line 1, replace the letter "A" with --- A device as claimed in claim 15, further a ---;
and

line 8, delete the phrase "a device as claimed in claim 15".

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance: there are no prior arts teaching or suggesting of a method and apparatus for detecting the presence of slag in a shroud for guiding molten metal from a ladle to a tundish comprising a receiving coil to generate induced voltage having a value outside defined voltage range is indicative of the presence of slag in the contents; and means for defining the voltage range depending on the magnitude of the measured flow.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cervantes et al discloses a method and system for controlling of a gas-containing hidden flow of molten metal in a space defined by a tubular device, comprising transmitting and receiving coils surround a pouring nozzle. [US 7,031,949]

Ogura et al discloses a system for removing non-metallic foreign matter in molten metal including a tundish and a coil device to generate magnetic field. The molten metal in

the swirl flow bath of the tundish is flown in swirl fashion in the horizontal direction by the magnetic field. [US 5,429,655]

Fujisaki et al discloses a method and apparatus for continuously casting a metal slab made of steel are provided for uniformly circulating molten metal on a meniscues in a mold. [US 5,746,268]

Schilenger et al discloses a method and apparatus for controlling metals processing by melting a metal ingot and counting molten metal droplets during melting. The furnace voltage and current are evaluated over one haft line cycle period for the value which yields the greatest absolute value. [US 6,019,811]

5. Any inquiry concerning this communication or earlier communications from examiner should be directed to primary examiner **Van Trieu** whose telephone number is (571) 272-2972. The examiner can normally be reached on Mon-Fri from 8:00 AM to 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Mr. Daniel Wu** can be reached on (571) 272-2964.

ABSTRACT (new)

A method and device are provided for detecting the presence of slag in a shroud through which molten metal passed from a ladle to a tundish. An induced voltage generated at a receiving coil is compared with a defined voltage range. If the induced voltage has a value outside the defined voltage range, it is indicative of the presence of slag. The voltage range is defined in dependence of the flow of molten metal passing through the shroud. A casting plant is also provided.
